

CASE STUDY (CSF110):

A regulator in Japan has received a request to import potatoes from the Republic of Korea.

Objective:

- Use the Biosafety Clearing House (BCH) to access information that a regulator might need to assess an application for importing Living Modified Organisms (LMOs).
- Practice searching for decisions and organisms and use the BCH to control imports.

Scenario:

You just started working for a Competent National Authority in Japan. You received a request to import potatoes from the Republic of Korea to be used as food and animal feed.

Use the BCH to answer the following questions:

- Q1.** What Genetically Modified (GM) potatoes have been approved in the Republic of Korea that might be in the shipment?
- Q2.** Have all of the GM potato events that may be present in the shipment been approved for use as food or feed in Japan?
