

CASE STUDY (CSF11):

A risk assessor wants to find information relevant to assessing virus-resistant papaya.

Objective:

Use the Biosafety Clearing House (BCH) to find a broad range of information that may assist in undertaking a risk assessment.

Scenario:

You work for the Competent National Authority in Ghana. You received your first application to import genetically modified papaya for field trials. The modified papaya contains a coat protein gene from the papaya ringspot virus (PRSV), making it resistant to the virus.

Carry out a quick survey of relevant information on the BCH that may assist you in undertaking a risk assessment.
